

ViTap Model Vi2 Pre-Installation Customer Checklist

Below is a summary of the services required to be in place prior to the installation of the Vivreau ViTap2. Further details can be found in your system specifications and pre-installation video. If you have any questions regarding these services, please contact your Fulfillment Coordinator.

Please note: These items do not need to be completed at the time you submit the checklist. The checklist serves as an acknowledgement that these items will be ready prior to our technician's arrival. This document is REQUIRED before we are able to release any shipments.

PLUMBING *(Page 3,5 of Specification Sheet)*

Waterline and Shut-off Valve

- 1 potable ½" cold water supply terminating in a ½" ball valve, ½" female pipe thread; Ball valve must be accessible for servicing.
- Minimum water pressure 50 PSI and Minimum water flow 80 Gallons per hour.
- **Location** – Within 40" of unit. Water shut-off valve to be located at low level. Requires sufficient room for a 12" inch long fitting to be connected to the shut-off valve.

Drain

- Customer will need to supply a vertical trapped drain according to state and local codes.
- The circuit must be at least 1 ¼" ID
Location – Must be located inside Vivreau cabinet. Top of waste up stand should be a maximum of 24" from the base of the unit. Top of waste circuit should be located a minimum of 6" inches below the work surface the Vi Tap will be installed in.

The Vivreau system incorporates back flow prevention, any additional back flow devices required by local or state code must also be supplied by the customer prior to installation. There should not be any other filters/pre-filters before the Vivreau system.

ELECTRICAL *(Page 3&4 of Specification Sheet)*

(1) 20amp electrical circuit (5-20R) 120v, 60Hz (11 amps)

Location - Within 40" of unit. Electrical circuits to be located in base cupboard unit at high level in either left or right corner (not beneath dispense tap.) GFCI protection is recommended.

MILLWORK *(Page 3,4 of Specification Sheet)*

Cabinet Size – An empty cabinet with the following minimum dimensions will be sufficient:

- Width 24"
- Depth 24"
- Interior Height 29 ½"

Countertop: Drip Tray and Tap Holes – See drawing on page 7 of Specification sheet

- 2 holes cut out for tap dispenser and drain
- 2 holes for mounting
- **Location** - The taps must be mounted directly above the unit.

Ventilation

- If the system is to be installed in an enclosed space or cabinet, top and bottom ventilation must be provided. A minimum of 24sq inches for each ventilation is needed.
- **Location** – one near the base and the other at the top of the enclosure both venting to open fresh air in a free and unobstructed area.

In order to ensure the smoothest possible installation, **SITE PHOTOS** of the following items will be requested by your Fulfillment Coordinator prior to installation.

- Drain
- Waterline
- Top Ventilation
- Bottom Ventilation
- Electric
- Countertop Holes

CO2 SUPPLY *(Page 5 of Specification Sheet)*

Please indicate if you will be using an individual canister or bulk supply.

CO2 Canister **OR** CO2 Bulk Supply*

- Vivreau does not supply CO2.
- **Location** – Within 40" of unit.

*If connecting to a bulk or existing CO2 system, your CO2 supplier would have to provide a CO2 line terminating at a ¼" barbed shutoff valve, 100psi minimum pressure.)

INSURANCE - Is a Certificate of Insurance required for site access/installation?

- Yes - Please provide requirements or sample to your Fulfillment Coordinator
 No

ADDITIONAL DELIVERY SERVICES

Select any that apply.

Standard delivery is to your loading dock by freight carrier.

- Lift Gate Service (no loading dock) \$175
